Git and GitHub Practical Guide (Updated)

Complete reference based on your successful PL300 repository setup and push workflow.

Normal Daily Workflow
cd "C:\Users\RaghuvirKumawat\OneDrive - Accordion Partners\Documents\PL300"
git status
git add "filename.pdf"
git commit -m "Describe change"
git push

Add One Specific File
git add "Git_and_Command_Line_Quick_Guide.pdf"

Add Multiple Files
git add file1.pdf file2.xlsx

Add All Files
git add .

Check Status
git status

View Commit History
git log --oneline

Check GitHub Remote
git remote -v

First Time Setup
git init
git add .
git commit -m "Initial commit"
git remote add origin https://github.com/USERNAME/REPO.git
git push -u origin master

If Push Is Rejected (fetch first)
git pull origin master --allow-unrelated-histories
git commit -m "Merge remote repository"
git push -u origin master

Your Actual Successful Example
git add "pl-300 1.pdf"
git commit -m "pl-300 1.pdf"
git push -u origin master
