Git and Command Line Quick Guide

Commands used during your first GitHub push workflow.

cd Documents

Change directory to the Documents folder.

dir

List files and folders in the current directory.

git --version

Verify that Git is installed.

git init

Initialize a Git repository in the current folder.

git status

Show branch status, staged files, and pending changes.

git add .

Stage all files in the current folder for commit.

git commit -m "Initial commit"

Create a snapshot of the staged files.

git remote add origin

Connect the local repository to GitHub.

git remote -v

Display configured GitHub remotes.

git push -u origin master

Push the local master branch to GitHub and set upstream tracking.

git push

Push future commits to GitHub after upstream is configured.

Typical Workflow

1. cd Documents
2. cd Snowflake_training
3. dir
4. git init
5. git add .
6. git commit -m "Initial commit"
7. git remote add origin https://github.com/your-user/repository.git
8. git push -u origin master
